

Challenge

Booking:

Long turnaround time for booking and containers release approval ,causing delays in shipment execution.

Shipping Line

Most export destination are only available via MSC which creates containers availability during peak season.

Stuffing

The stuffing area is limited, Causing delays in loading

Absence of the agent during the stuffing process may create coordination gaps, leading to operational errors or delay.

There is no dedicated yard to storing containers after stuffing, relying only on Merec space which leads to conjunction and negatively impacts operation flow

Inspection report:

Incorrect weights and details entered by the surveyor, which require more time for revision

Shipping documents preparation

Slow documents preparation by the FFW and revised drafts that leads to additional workload on the execution team in addition to Higher risk of errors due to pressure.

Bill of Lading (B/L)

Delays in issuing the Bill of Lading by the shipping line and that increase Risk of penalties due to late amendments

No dedication team from FFW to follow up with Authorities and shipping line

Financial:

There are delays in the financial cycle related to shipping bill payments, as the payment process takes a long time to complete. In case of any amendment to the bill of lading, the same process must be repeated from the beginning, resulting in duplicated efforts and extended processing time

Recommendation:

- Providing adequate yard for stuffing and storage containers to improve the operation
- Assign a Dedicated Coordinator responsible for:
Government-related transactions
Following up with the shipping line
Monitoring all shipping documentation
- Assign person from FFW to follow operation in site.
- Establishing a prepayment plan with the shipping line to cover freight costs in advance, along with periodic monitoring of the account, in order to accelerate payment processing and reduce the payment cycle time, especially in case of bill of lading amendments
